

Laser procedure Protocol

- Prepare treatment room – windows covered and reflective surfaces covered. Wipe bed with sanitiser and cover with couch roll.
- Prepare treatment trolley - Ultrasound gel, spatulas, wet wipes, aloe vera gel, white penicil, tissues, safety goggles.
- Prepare client – remove clothing from treatment area, make sure the hair has been shaved the day before and there is no visible hair in the area.
- Wipe over the area with a wet wipe or alcohol-free prep solution.
- Apply a thin even layer of gel to the treatment area with a spatula.
- Set the machine parameters according to manufacturer instructions.
- Cover area with desired handpiece – IPL following imprint into gel with no overlapping – LASER 2mm overlapping.
- Once erythema is present remove gel with spatula and wipe over with wet wipe then dry skin with tissue.
- Apply cooling lotion to the area.
- Give aftercare.
